# 1. Introduction

## 1.1. Overview

This project involves creating a web application that will manage heart screening events across the United States. There is currently a system in place that is localized to areas of Florida, however, the organization behind these events wants to upgrade their system due to limitations in the current design. Our task is to create an event management system that will scale to a national scope, while keeping or decreasing current speeds of operations in the application.

## 1.2. Purpose

This test plan will outline features to be tested for the event management system and explain how the features will be tested. The goal of these tests will be to verify functionality and eliminate the presence of as many bugs as possible. Additionally, development of the event management system will be done in a test driven development (TDD) format, so the test plan will be followed closely for each feature before implementation can begin.

## 1.3. Approach

The development team will be using Mocha and Chai for unit testing all of the code. Besides this, we will also be using testing tools provided by AWS. Finally, each item will be tested on multiple platforms including Google Chrome, Mozilla Firefox, and Microsoft Edge.

# 2. Testing Plan

## 2.1. Feature 1: Private Event Link Generation

### 2.1.1. Case 1

<b>Description</b>	Test if a link is generated when a director creates a private event.
<b>Purpose</b>	The feature requires a link to be created when a director creates a private event. This test ensures that the link is created.
<b>Input</b>	Button Click - Submission of event creation form

<b>Expected Output</b>	A link is presented to the director.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Initial unit testing of code with Mocha and Chai</li> <li>2. Create a private event with a director account</li> <li>3. Check that link is presented to the director</li> </ol>

## 2.1.2. Case 2

<b>Description</b>	Test if only the director who creates a private event can see the event's link.
<b>Purpose</b>	Links for private events must only be viewable by directors who make the events. If anyone else can see the links there is a bug.
<b>Input</b>	None
<b>Expected Output</b>	Separate directors will not be able to see the created private event or its link.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Initial unit testing of code with Mocha and Chai</li> <li>2. Create a private event with a director account</li> <li>3. Log into a separate director's account and attempt to view the created private event and its link.</li> </ol>

## 2.1.3. Case 3

<b>Description</b>	Test that non-private events still do not produce a link.
<b>Purpose</b>	This feature is only supposed to affect private events, so it should be assured that public events are not affected by changes made to the system.

<b>Input</b>	Button Click - Submission of event creation form
<b>Expected Output</b>	New event created with no link outputted to director.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Initial unit testing of code with Mocha and Chai</li> <li>2. Create a private event with a director account</li> <li>3. Check that link is presented to the director</li> </ol>

## 2.2. Feature 2: QR Code Generation

### 2.2.1. Case 1

<b>Description</b>	Test if a QR code is generated when a director clicks the proper button.
<b>Purpose</b>	To ensure the feature functions as desired.
<b>Input</b>	Button Click - QR generation button for an event
<b>Expected Output</b>	A QR is displayed that can be saved.
<b>Procedure</b>	Click button for generation and verify that it is displayed

### 2.2.2. Case 2

<b>Description</b>	Test that QR pulls up the proper registration form when scanned.
<b>Purpose</b>	The QRs must pull up the proper registration form otherwise the function is useless.
<b>Input</b>	QR Scan
<b>Expected Output</b>	The scanner should be transferred to the

	event's registration page.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Scan QR code</li> <li>2. Verify QR code actually scans</li> <li>3. Verify destination is the correct path</li> </ol>

## 2.3. Feature 3: Display Available Time Slots for a Private Event

### 2.3.1. Case 1

<b>Description</b>	Test that all available time slots on a private event with no registered participants are presented.
<b>Purpose</b>	This test will ensure the base functionality of this feature.
<b>Input</b>	A newly created private event
<b>Expected Output</b>	Available time slots are displayed automatically
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create a new private event with X number of time slots</li> <li>2. Verify that X number of timeslots are displayed</li> <li>3. Verify that the correct times are available</li> </ol>

### 2.3.2. Case 2

<b>Description</b>	Test that all available time slots on a private event (that have <i>some</i> but not <i>all</i> time slots registered) are presented.
<b>Purpose</b>	This test will ensure that the feature is able to filter out unavailable time slots.
<b>Input</b>	A newly created event with X participants registered
<b>Expected Output</b>	Only the time slots not registered for are displayed

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create a new private event</li> <li>2. Register X amount of participants for different time slots</li> <li>3. Begin registration of a new participant</li> <li>4. Verify that registered time slots are not available for a new registration</li> </ol>
------------------	---

2.3.3. Case 3

<b>Description</b>	Test that <i>no</i> time slots are presented on a private event that has all time slots registered.
<b>Purpose</b>	This is to test for cracks in the filtering process of unavailable slots.
<b>Input</b>	A newly created private event with all time slots filled
<b>Expected Output</b>	No available time slots are displayed
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create a new private event</li> <li>2. Register full amount of participants for different time slots</li> <li>3. Begin registration of a new participant</li> <li>4. Verify that no time slots are available for a new registration</li> </ol>

2.4. Feature 4: Reminder System for Registered Participants

2.4.1. Case 1

<b>Description</b>	Test system to ensure it reminds participants of an event at 5pm the day before the event.
<b>Purpose</b>	This test is to have an initial test on our cron job implementation and ensure that the timing job is performed accurately.
<b>Input</b>	None

<b>Expected Output</b>	Each participant of an event will get an email notification at 5pm the day before an event.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event with a director account</li> <li>2. Register for event with a participant account</li> <li>3. At 5pm the before an event ensure that the participant gets an email reminder for the event</li> </ol>

## 2.4.2. Case 2

<b>Description</b>	Test system to ensure it reminds many participants of an event at 5pm the day before the event.
<b>Purpose</b>	This test is to give a larger scale to the cron job testing.
<b>Input</b>	None
<b>Expected Output</b>	Each participant of an event will get an email notification at 5pm the day before an event.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event</li> <li>2. Register for the event with many participant accounts</li> <li>3. Test if the participants are given a notification at the proper time.</li> </ol>

## 2.5. Feature 5: Close Online Event Registration Day Before Event

## 2.5.1. Case 1

<b>Description</b>	Test if an event closes its registration at 5pm the day before the event.
<b>Purpose</b>	The system is required to close events at 5pm the day before the event takes place. This test ensures that the events close

	properly and at the correct time.
<b>Input</b>	None
<b>Expected Output</b>	Event registration is unavailable to participants
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event with a director account</li> <li>2. Attempt to sign up for event with participant account after 5pm</li> <li>3. Ensure participants can't sign up after cut off time</li> </ol>

## 2.6. Feature 6: Searching for Payments

### 2.6.1. Case 1

<b>Description</b>	Test if accountant/director accounts can search for customer payments in a given date range.
<b>Purpose</b>	The system is required to allow these users to search for payments in various methods, one being by a date range.
<b>Input</b>	Date range
<b>Expected Output</b>	All payments made from those given dates
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Use accountant account to request a spreadsheet of a payment history</li> <li>2. Choose to filter by date range</li> <li>3. Select upper and lower bound of date range</li> <li>4. Check if the resulting spreadsheet contains information from correct date range</li> </ol>

### 2.6.2. Case 2

<b>Description</b>	Test if accountant/director accounts can search for customer payments on a given
--------------------	--

	date.
<b>Purpose</b>	The system is required to allow these users to search for payments in various methods, one being by a given date.
<b>Input</b>	A date
<b>Expected Output</b>	All customer payments on that given date
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Use accountant account to request a spreadsheet of a payment history</li> <li>2. Choose to filter by specific date</li> <li>3. Select date</li> <li>4. Check if the resulting spreadsheet contains information from correct date</li> </ol>

## 2.6.3. Case 3

<b>Description</b>	Test if accountant/director accounts can search for customer payments from a given event.
<b>Purpose</b>	The system is required to allow these users to search for payments in various methods, one being by searching all payments for a given event.
<b>Input</b>	The event object, containing all event details
<b>Expected Output</b>	All payments made from participant's towards that event
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Use accountant account to request a spreadsheet of a payment history</li> <li>2. Choose to filter by specific event</li> <li>3. Select the event</li> <li>4. Check if the resulting spreadsheet contains information from correct date range</li> </ol>

## 2.6.4. Case 4

<b>Description</b>	Test if accountant/director accounts can search for customer payments for a given participant.
<b>Purpose</b>	The system is required to allow these users to search for payments in various methods, one being by searching all payments for a given participant.
<b>Input</b>	The participant's information
<b>Expected Output</b>	The participant's confirmation of payment
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Use accountant account to request a spreadsheet of a payment history</li> <li>2. Choose to filter by date range</li> <li>3. Select upper and lower bound of date range</li> <li>4. Check if the resulting spreadsheet contains information from correct date range</li> </ol>

## 2.7. Feature 7: System Changes Wording Based on Participant Age

## 2.7.1. Case 1

<b>Description</b>	Test if accounts with an age of 17 or younger get displayed the correct text.
<b>Purpose</b>	The text presented to participants will vary depending on if they are older than 17 or younger than 18.
<b>Input</b>	Use app with an account with age set for <18
<b>Expected Output</b>	Based on the age, the appropriate text for registration is displayed. (i.e. Parent/Guardian signature)
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Using an account that is &lt;18 browse the application</li> <li>2. Ensure each text shows the correct wording for the account age</li> </ol>

## 2.7.2. Case 2

<b>Description</b>	Test if accounts that are 18 or older get displayed the correct text.
<b>Purpose</b>	The text presented to participants will vary depending on if they are older than 17 or younger than 18.
<b>Input</b>	An account with age set for 18+
<b>Expected Output</b>	Based on the age, the appropriate text for registration is displayed. (i.e. participant's own signature)
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Using an account that is 18+ browse the application</li> <li>2. Ensure each text shows the correct wording for the account age</li> </ol>

## 2.8. Feature 8: Allow a Director to Delete Their Events

## 2.8.1. Case 1

<b>Description</b>	Test if an admin account is notified when a director requests to delete one of their events.
<b>Purpose</b>	The event deletion will involve requesting deletion from admins and this test ensures the admins receive the request.
<b>Input</b>	Button click on delete button
<b>Expected Output</b>	Admin account receives a notification that the director requested to delete an event
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event with a director account</li> <li>2. Attempt to delete the event</li> <li>3. Login with administrator account and verify that notification of deletion request is present</li> </ol>

## 2.8.2. Case 2

<b>Description</b>	Test that an admin can properly confirm and deny deletion of an event.
<b>Purpose</b>	This test ensures that the confirmation/denial of an event deletion works properly with no side effects.
<b>Input</b>	An event submission
<b>Expected Output</b>	The event successfully denied and not appearing under list of events nor in the database
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create and request deletion of an event from a director account</li> <li>2. Use an admin account to confirm the deletion of the event</li> <li>3. Ensure that all records of the event are deleted</li> </ol>

## 2.9. Feature 9: Require Confirmation for Deletion of Events

## 2.9.1. Case 1

<b>Description</b>	Test the confirmation for event deletion.
<b>Purpose</b>	To prevent accidental event deletion, a confirmation will be presented to a director on deletion attempt. This test will ensure the functionality of this feature.
<b>Input</b>	Button click on delete button.
<b>Expected Output</b>	A prompt displays asking the director if they are sure that they want to submit a request for deletion.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event with a director account</li> <li>2. Attempt to delete event</li> <li>3. Ensure pop up requesting confirmation for deletion appears</li> </ol>

## 2.10. Feature 10: Allow Participants to Cancel Their Registrations

## 2.10.1. Case 1

<b>Description</b>	Use a participant account to test canceling a registration.
<b>Purpose</b>	This tests if a participant can properly back out of an event after signing up for it.
<b>Input</b>	Button Click: Participant cancellation of event
<b>Expected Output</b>	The participant's information and registration removed from the event
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Sign up for an event with a participant account</li> <li>2. Cancel the registration of the account</li> <li>3. Check for pop up</li> <li>4. Check that pop up displays correct information</li> </ol>

## 2.10.2. Case 2

<b>Description</b>	Ensure that options for either refunding or crediting for a new event pops up after a participant cancels registration.
<b>Purpose</b>	This ensures that customers will be able to properly get their money back from an event they could not attend.
<b>Input</b>	Button Click: Participant cancellation of event
<b>Expected Output</b>	When the participant cancels registration, a pop up with the options to get a refund or credit money appears.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Sign up and cancel</li> </ol>

## 2.10.3. Case 3

<b>Description</b>	Test out refund functionality.
<b>Purpose</b>	Since the system works with people's money, the refund system must be tested thoroughly.
<b>Input</b>	Participant cancellation of registration for an event.
<b>Expected Output</b>	A payment from the system's account to the participant's account that requested a refund.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event with a director account</li> <li>2. Sign up for the event with a participant account</li> <li>3. Cancel registration for event</li> <li>4. Choose refund option when cancelling</li> <li>5. Check that system properly transferred funds to participant</li> <li>6. Check that system transferred correct amount of funds</li> </ol>

## 2.10.4. Case 4

<b>Description</b>	Test out crediting functionality.
<b>Purpose</b>	If a customer prefers to credit for another event, the accreditation system must be tested.
<b>Input</b>	Participant cancellation of registration for an event.
<b>Expected Output</b>	System properly stores how much a participant has been credited.
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Create an event with a director account</li> <li>2. Sign up for the event with a participant account</li> <li>3. Cancel registration for event</li> </ol>

	<ol style="list-style-type: none"> <li>4. Choose credit option when cancelling</li> <li>5. Check that system properly stores credit for participant</li> <li>6. Check that system credits the correct amount of money</li> </ol>
--	--

## 2.11. Feature 11: Allow Participant Payments to be Exported to a Local Spreadsheet

### 2.11.1. Case 1

<b>Description</b>	Test button for converting participant payments to spreadsheet format.
<b>Purpose</b>	This ensures that the button properly triggers spreadsheet creation.
<b>Input</b>	Click on export button
<b>Expected Output</b>	A spreadsheet containing participant payment information
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Log in with accountant account</li> <li>2. Click button to convert a payment history into a spreadsheet</li> <li>3. Check that the spreadsheet is created and stored properly</li> </ol>

### 2.11.2. Case 2

<b>Description</b>	Test information conversion from databases to spreadsheets.
<b>Purpose</b>	This test is to ensure that all the information in the participant payment database is properly transferred to spreadsheet format.
<b>Input</b>	Database tables and information from database
<b>Expected Output</b>	A spreadsheet containing information that was in the database

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Log in with accountant account</li><li>2. Click button to convert a payment history into a spreadsheet</li><li>3. Check if all the cells in the spreadsheet properly match the database information</li></ol>
------------------	--

## 2.12. Feature 12: Verify a User Before Accessing ECG Information

This feature needs to be further discussed with the client for more information before tests can be written
